The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

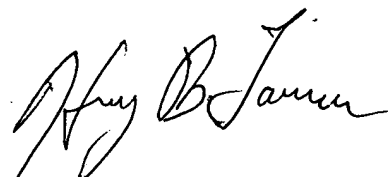

Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hanson et al (5,201,185) in view of Denvir. Hanson discloses the invention substantially as claimed. Hanson discloses a defrost method and system in which if the heat exchanger temperature sensor is in a failure state the defrost execution determination condition is altered and the defrost termination is changed from the normal defrost termination condition (see col. 10, line 35 to col. 11, line 34). If a sensor failure is detected at block 382 then a temperature SP of the storage compartment is compared to a reference temperature "50" at block 384 and the defrost operation is prevented if the temperature of the storage compartment is not lower than the reference temperature (see Figure 7). Hanson uses a hot gas defrosting means to defrost the heat exchanger. Denvir teaches the use of a defrost heater 18 to defrost a heat exchanger (see col. 2, lines 52-65) and the detection of an open or short circuit condition on a temperature sensor in order to detect the failure of the sensor (see col. 3, lines 51-62). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have modified the system of Hanson such that it included the use of a defrost heater to defrost the heat exchanger and the detection of an open or short circuit condition on the temperature sensor in order to detect the failure of the sensor in view of the teachings of Denvir.

Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.
